

# Topographic Survey Highway and Utility Surveys

Gaining detailed information of highway infrastructure is a vital first step in long term planning of utility placement or traffic-management.

Brunel Surveys Ltd are well-versed in obtaining such information for local authorities and have recently completed an in-depth survey for Swindon Borough Council.

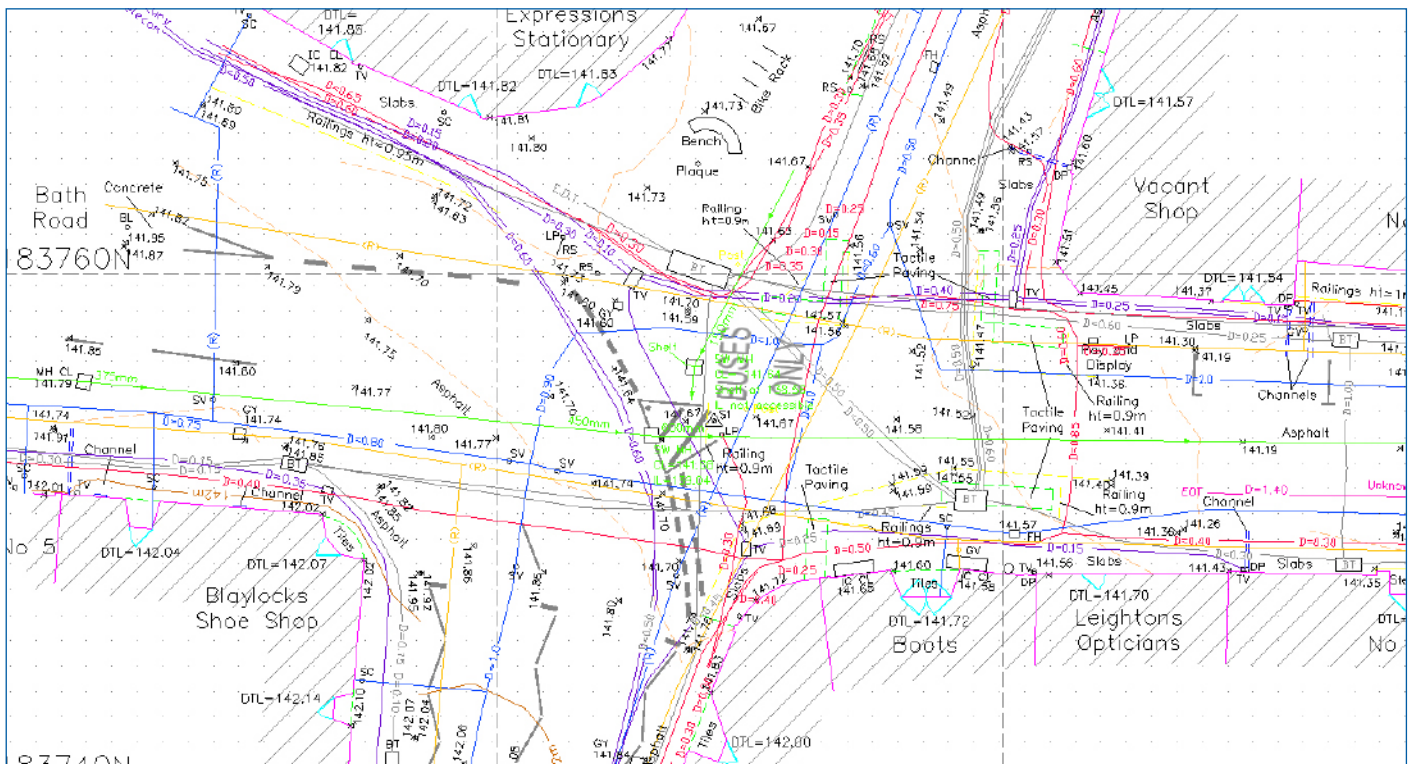

Wood Street is a short residential street in the centre of Swindon and the request from the council was to produce a topographic survey and trace the underground utilities.

This seemingly straightforward request actually involved rather more organisation than first glance might suggest.

The topo survey itself required the partial closure of the road to allow our surveyor to act in safety. When the time came to work on the utility tracing rather more extreme measures were required.

In order to reduce the disruption to residents and local traffic we decided to close the road for a couple of hours. In order to minimise any disruption we were on site early in the morning - 4 a.m. to be precise.

Consequently we were on site before dawn, and off-site before any disruption was caused.
