

Topographic Survey Landfill Survey and Design

Brunel Surveys Ltd have a long history of assisting land management companies get the best use out of their assets.

Paul Haydon has a degree in civil engineering, and over 25 years experience in survey and design of landfill sites. Paul is assisted by Simon Chimbaza and Stuart Gilling, both who have extensive experience in this field.

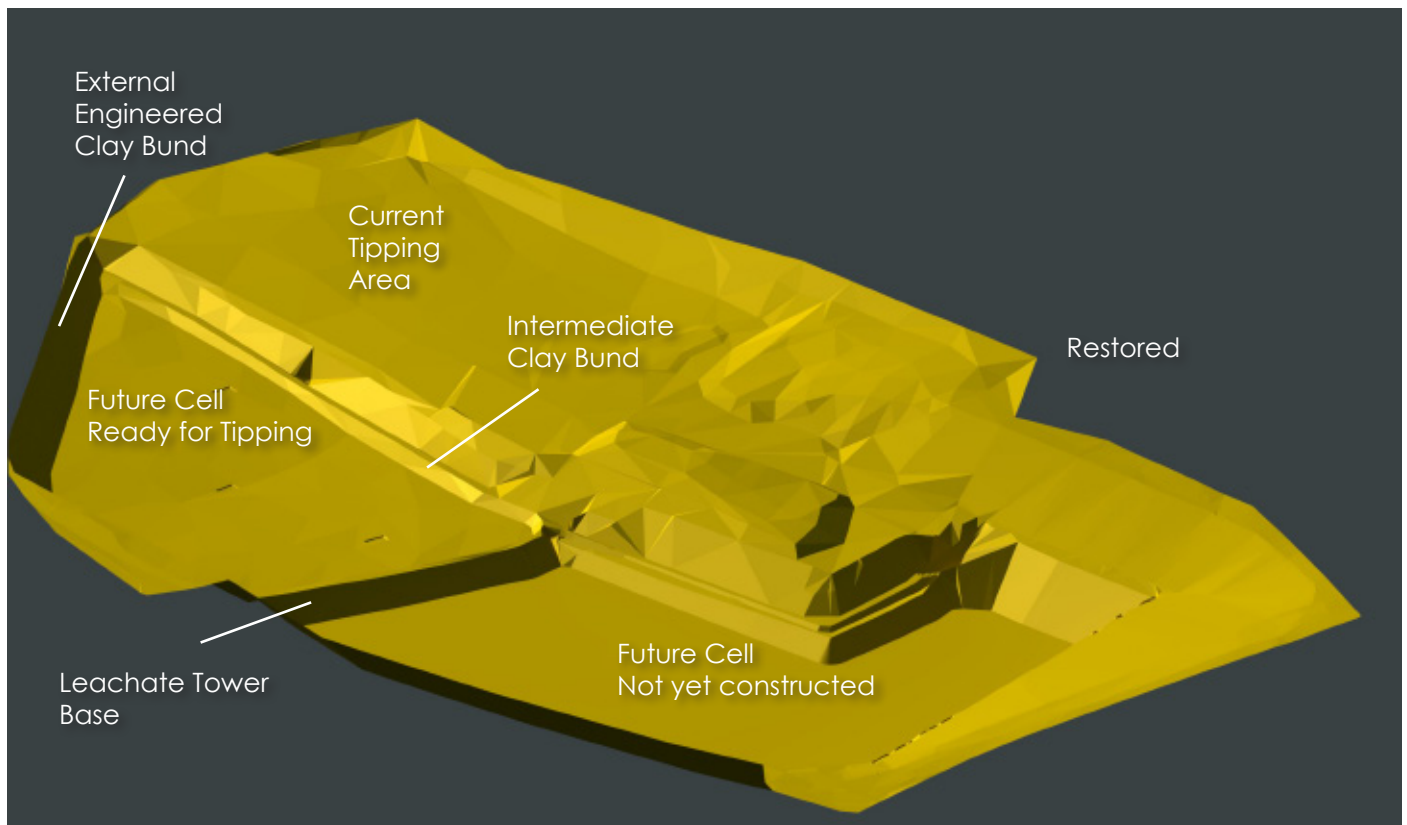

We regularly survey green fields, and design a restored shape, including planning drawings. Once the site is started we can provide regular visits to do

update surveys, setting out, and calculations such as site life, and the length of time left to fill in the current working area.

We also provide annual settlement drawings for the Environment Agency.

The site managers tend to need their surveys to include underground cables for Health and Safety plans, transport plans and also plans showing monitoring points, and gas take off systems.

We utilise powerful 3D modelling software (Microstation/Siteworks) and trimble GPS equipment for this work.
