

Topographic Survey Quarry Surveys

When a new quarry is planned the first step is a survey. As a survey company we have a lot of experience in this work.

Headed by Paul Haydon, who has a degree in Civil Engineering and is a member of the Chartered Institute of Engineering Surveyors the Brunel Surveys Topographic Surveys team are able to conduct these surveys, then move on to planning and volumetric analysis using given borehole data.

Often on new sites we provide planning drawings, then as the site starts we do ongoing management surveys, such as stockpile analysis, and updated reserves calculations.

We are also experienced in mine surveys, having been engaged for a number of years in a rolling programme of updating the surveys of the Bath Stone mine.

Additionally we set up the survey control for a new mine on Portland Bill, just as surveying to National Grid using GPS became possible.
