Topographic Survey

Utility and Drainage Surveys

Brunel Surveys Ltd has a department specialising in the tracing of underground services.

Mark Timbrell has many years experience in this field, having run his own Utility Tracing business for many years.

Dean Schofield and Lee Bushell have experience in tracing services at Brunel Surveys, and have also been trained at the Survey Centre in Worcester.

They are all trained to Streetworks 10, and can plan and carry out their own traffic management. They also have confined spaces training so can enter manholes if necessary

The job shown below was carried out for Swindon Borough Council on a busy High Street.

We traced all services using records, Cat and Genny, and Ground Penetrating Radar. We also lifted manhole covers and mapped the sewers

Traffic management was planned by ourselves, approved by the local Streetworks co-ordinator, and then safely carried out by ourselves.

We also carried out the topo survey, which was delivered in 2 and 3d Autocad, as well as MX formats.

We have done many similar surveys including Supermarket car-parks and loading bays, schools, sports centres and development sites.
